

Leon Telemaque

Player Systems Designer & LiveOps Analyst

leon.telemaque@gmail.com · Toronto, Ontario · leon-telemaque-portfolio.vercel.app

Player systems and LiveOps designer with a consumer behaviour academic foundation. I analyze why players make decisions inside designed systems and build the telemetry infrastructure to measure and improve those outcomes. Targeting Summer 2028 internship roles in game design, LiveOps, and player analytics.

PORTFOLIO WORK

Lifecycle Churn System [PostgreSQL · Python · Streamlit] — 10,000-session telemetry pipeline predicting player frustration and churn before it happens. Live dashboard with real cohort segmentation and intervention triggers.

DBD Lifecycle Drop-Off Analysis [Cohort Analysis · Tableau] — Dead by Daylight retention study identifying the specific session events that precede player abandonment across onboarding, mid-game, and late-game cohorts.

Player Systems Lab [Interactive · Six Systems] — Flagship interactive design tool — drag sliders across six game systems (Progression, Combat, LiveOps, Economy, Attachment, Onboarding) and watch player archetypes, retention estimates, and design trade-offs respond in real time.

Destiny — New Light Onboarding Architecture [Onboarding · Retention Design] — Structural analysis of Bungie's New Light onboarding system — how guided games, veteran pairing, and entry-point architecture manage a decade of content complexity for first-time and returning players simultaneously.

Marathon Intervention Document [LiveOps Analysis] — Audience misalignment diagnosis for Bungie's Marathon — three intervention proposals targeting the Day 1 retention crisis across competitive, casual, and returning player segments.

Master Duel Economy Analysis [Gacha · Monetisation] — Gem economy failure case study — why Konami's F2P model collapses under its own pacing and how the gem drain rate structurally prevents the positive reinforcement loop the game claims to offer.

EDUCATION

Bachelor of Business Administration — Marketing & Consumer Culture · Trent University Durham · Oshawa, ON

September 2025 – Spring 2029 (expected)

- Specialisation in Marketing and Consumer Culture — consumer decision psychology, retention frameworks, and behavioural analytics applied to product and game systems design
- Relevant coursework: Introduction to Marketing, Managerial & Market Research, Advertising, Consumer Behaviour, Retail Marketing, Branding, Principles of Online Marketing

EXPERIENCE

Sales Associate · Leon's Furniture · Toronto, ON

2020 – Present · 5 years

- Developed consultative sales approach — qualifying customer needs, matching product to lifestyle and budget, managing long-cycle purchase decisions across multiple visits
- Sustained consistent performance over five years in a commission-adjacent environment, building repeat customer relationships and maintaining product knowledge across a large catalogue

SKILLS & TOOLS

Design: Player systems architecture · LiveOps intervention design · Retention modelling · Economy design · Onboarding architecture · Progression frameworks

Analytics: PostgreSQL · Python · Streamlit · Tableau · Cohort analysis · Telemetry pipeline design · Player behaviour segmentation

Tools: Unreal Engine 5 · Figma · Git · SQL

Academic: Consumer behaviour theory · Behavioural economics · Marketing analytics · Market research methodology
